

Waste Performance Statistics 2018/19

Report of the Chief Officer for Highways, Infrastructure Development and Waste

Please note that the following recommendations are subject to consideration and determination by the Committee before taking effect**Recommendation: It is recommended that**

- (a) the Committee note the success of Devon authorities within the current financial climate;**
- (b) Members continue to support DASWC authorities to develop and maintain effective services for residents to deliver greater participation and satisfaction.**

1. Summary

This report provides members with an overview of Devon and Torbay waste statistics for 2018/19. Individual authority waste statistics tables can be found in Appendix 1.

Official waste statistics for English Authorities are published by DEFRA in the autumn.

2. Headline Waste Statistics.

In 2018/19, Devon achieved its highest ever recycling rate at 56% (National Indicator 192 (NI192) % household waste sent for reuse, recycling and composting).

| 2018/19 | Devon | Torbay |
|--------------------------|--------------------|---------------|
| Recycling Rate (NI192) | 56.0% | 41.3% |
| Waste Growth - Household | -0.1% | -2.4% |
| Highest WCA (NI192) | East Devon - 59.1% | n/a |

The 'Devon' rate includes the performance of constituent waste collection authorities (WCAs) and recycling centres (HWRCs) operating under a two-tier Waste Disposal Authority (WDA) function. Representing an increase of 2% on the previous year, and 0.3% higher than the authority's previous highest rate of 55.7% in 2016/17, this success is to be welcomed in maintaining Devon's position as one of England's highest performing WDAs. In 2017/18 Devon was ranked 6th highest WDA in England according to published DEFRA statistics.

Torbay, as a unitary authority (UA), achieved a recycling rate (NI192) of 41.3% during 2018/19, a reduction of 1.3% on the previous year. In 2017/18 Torbay was positioned 40th out of 92 UAs in England achieving its highest rate of 44.7% in 2012/13.

In 2018/19, six of Devon's eight WCAs achieved a recycling rate of over 50% following Teignbridge's lead as the first Devon authority to achieve this milestone in 2006/07.

East Devon achieved the highest WCA recycling rate in 2018/19 at 59.1%, an increase of almost 5% on the previous year. The highest rate achieved by any Devon authority was West Devon at 59.9% in 2011/12.

The greatest year-on-year performance increase was achieved by Torridge during 2018/19 at +10% to 51.3%. This significant boost places the authority equal with traditional 'high flyer' West Devon, also at 51.3%.

Household waste arisings remain constant at -0.1% and below the *Waste and Resource Management Strategy for Devon* (WRMS) growth projection of 1% annually. Torbay indicate a -2.4% reduction in household waste principally through a reduction in paper, card, organic waste and recycled HWRC waste.

3. Background

Whilst the UK maintains a legally binding European Union (EU) target to recycle 50% of household waste by 2020, individual local authorities have no statutory performance targets following the abolition of National Indicators in 2011. Despite this, English authorities continue to benchmark their recycling performance using these waste indicators in line with local strategies, targets, and momentum driven by over 40 years of EU derived waste policy including the *Landfill Directive*, *Landfill Allowance Scheme* (LATS) and *Waste Framework Directive*. More recently, the *EU Circular Economy* package has also been adopted by the UK which seeks to increase resource productivity and eliminate avoidable waste of all kinds by 2050.

Despite the lack of performance targets, local authorities remain legally bound to report waste data through *Waste Data Flow*, the national web-based system for municipal waste data reporting by UK local authorities to UK government, to enable national performance to be monitored in line with the *Waste Regulations 2011*.

In England, the Government's '*25 Year Environment Plan*' sets the ambition to '*leave the environment in a better state than we found it*' and this is supported by several key waste related strategies including '*Our waste, Our resources: A Strategy for England*' and the '*Litter Strategy for England*'. With this strong National policy background, DASWC's partnership '*Waste and Resource Management Strategy for Devon*' (WRMS) will also be updated to align with the renewed drivers and policies as they emerge, focussing waste as a central pillar of a Circular Economy.

Despite uncertainty surrounding the UK's proposed departure from the EU, the momentum for progressive waste policy is already engrained in current and proposed for future UK waste policy. Further progress is also anticipated during 2020 through secondary consultations for new policy areas including *Consistency in Recycling Collections*, *Deposit Return Scheme* and *Extended Producer Responsibility*, which are likely to become legally binding through the proposed *Environment Bill*.

Further policy impacts are also anticipated through a DEFRA review of the *Controlled Waste Regulations (2012)* (CWR) which not only form the basis for the definitions of waste; such as household and commercial, but also the types of waste for which local authorities may make a charge for. HWRCs and operational waste policy, including bulky waste collections and the calculation for recycling rates may all be impacted by the outcome of this review.

With a strong policy background, in 2017/18, the highest performing English WCA achieved a 63% recycling rate with the highest WDA rate at 57.2%, and UA 64.5%. Devon authorities have a long and successful record of recycling success achieving the highest performing English WDA rate nationally in 2010/11. However, despite these individual local authority successes, the recycling rate for England was 45.2% (45.7% for the UK) in 2017. With England accounting for over 80% of total UK waste generation, there is still significant progress required for the UK to meet its 50% target, and Devon authorities still have a role to play to improve performance locally and nationally.

3. 2018/19 - Recycling Performance

Recycling rates (NI192) for DASWC authorities are shown in table 1, and subject to validation, will be officially published by DEFRA through their annual autumn statistical release.

East Devon was the highest performing (NI192) Devon authority at 59.1% due to the roll out of its kerbside recycling service which includes weekly recycling and food waste, chargeable garden waste and three weekly residual collections.

Torridge also achieved notable success through the greatest year on year increase at +10% following the launch of a weekly recycling and food waste service with chargeable garden waste and fortnightly residual collections.

Despite Exeter's falling rate (-3.7%) to 2005 levels, the authority is proposing a significant expansion of its kerbside service to include food waste, glass bottles and jars. The inclusion of food waste will enhance the authority's chargeable garden waste service to boost organic waste recovery significantly with environmental and performance benefits anticipated.

| NI192 | 2017/18 | 2018/19 | % change (PY) |
|--------------|----------------|----------------|--------------------------|
| East Devon | 54.2% | 59.1% | 5.0% |
| Exeter | 30.8% | 27.1% | -3.7% |
| Mid Devon | 51.8% | 53.5% | 1.6% |
| North Devon | 45.5% | 45.6% | 0.1% |
| South Hams | 53.9% | 53.9% | 0.0% |
| Teignbridge | 55.4% | 56.3% | 0.9% |
| Torridge | 41.2% | 51.3% | 10.0% |
| West Devon | 51.2% | 51.3% | 0.0% |
| Devon | 54.0% | 56.0% | 2.0% |
| Torbay | 42.6% | 41.3% | -1.3% |

Table 1. 2018/19 Recycling Performance (NI192) for DASWC Authorities

Devon's success can be attributed to the effective partnership working through DASWC and support from Devon's residents. In particular, DASWC support for an aligned waste and recycling service, known as the Devon 'aligned option', was formally recognised in the Waste Prevention and Reuse Strategy for Devon 2017. This approach was intended to provide greater consistency for householders, offering more efficient joint communication options. Currently six DASWC authorities (East Devon, North Devon, Teignbridge, Torridge, West Devon and Torbay) offer residents close variations to the 'aligned option' shown in figure 1.

Progress toward the 'Aligned Option'

Version: September 2019

| | |  |  |  |  |
|---|---|---|---|--|---|
| | | Food Waste (Weekly) | Garden Waste (£/fortnightly) | Dry Recycling (Weekly) | Residue (fortnightly) |
|  | | | | | |

Figure 1. WRMS (Devon) – Aligned Option

Despite positive progress to date, table 2 illustrates variable performance profiles for individual authorities since the publication of the WRMS (2013). Whilst East Devon, Mid Devon, Teignbridge demonstrate continuous improvements; Exeter and West Devon illustrate weakening performance. However, a big improvement provided by Torridge's recent performance boost was achieved through service improvements. North Devon, South Hams, Devon and Torbay indicate overall stable performance over this six-year period.

Table 2 – NI192 Performance Profile 2013 - 2019

Whilst Exeter remains at the bottom of the Devon league table, a further reduction in rate during 2018/19 was principally due to an increase in the amount of material rejected from the Exeter Material Recycling Facility (MRF) due to changing market conditions and operational reasons. Whilst Exeter does offer a chargeable garden waste collection service, the authority collects approximately one third less organic waste than other authorities reflected in the low overall performance.

In support of WCAs, and reflecting DASWC's effective partnership working, Teignbridge, Mid Devon, East Devon, North Devon and Torridge have signed up to the County Council '*Shared Savings Scheme*' (SSS) where significant service changes can generate a 50% share of the actual disposal savings made by the WDA through reduced waste, or waste managed through lower cost routes, such as recycling or composting. This SSS incentive has not only enabled some authorities to invest in significant service improvements, but also to use their annual payment to maintain and improve local service delivery, which further improves performance and costs. Over £1.1m has been paid to 5 District Councils in 2018/19.

4. Material Summary

For Devon authorities, overall household recycling increased by +3.5%, comprising +3% for WCAs, +4.6% for HWRCs in Devon.

Principal WCA material increases are noted for;

Glass - East Devon (+316 tonnes) and Torridge (+358 tonnes).
Plastic – East Devon (+369 tonnes) and North Devon (+242 tonnes)
Organic – East Devon (+3,103 tonnes) and Torridge (+401 tonnes)

The greatest reductions are noted for paper & card at -632 tonnes overall, although significant variances occur between authorities with Exeter indicating -1,089 tonnes and East Devon +584 tonnes linked to service improvements. Table 3 illustrates material recovery for DASWC reported streams for Devon and Torbay.

Whilst East Devon increased the amount recycled significantly at +4,268 tonnes compared to the previous year, marginal reductions in residue (-362 tonnes) indicate that the authorities record of generating one of the lowest waste levels per resident (BVPI84a) are being impacted by an increase in organic waste in particular (+3,099 tonnes). This increase is to be expected through the provision of a new chargeable kerbside garden waste collection service but with indications that these collections will be promoted through future national policy, the authority may maintain its comparative low waste generation levels, particularly due the adoption of a reduced residual collection frequency, prompting greater recycling participation.

For HWRCs, whilst overall organic waste reduced by -1,943 tonnes, partly impacted by new organic collection services, 'other' category increased significantly (+4,671 tonnes) and within this, an increase in the recycling rate for recovered timber accounted for the majority of that growth. With ongoing efforts to increase HWRC reuse, 2018/19 saw a welcome increase of +163 tonnes to over 1,000 tonnes of recovered items resold to members of the public through HWRCs.

For Torbay, total household waste reduced by -1,443 tonnes with residual waste stable but decreases for the overall kerbside collected (-594 tonnes) and HWRC (-903 tonnes) recycled

materials. Reductions in organic waste collected via the Torbay HWRC were partly offset with a +117 tonnes increase to kerbside food waste. Torbay also noted a reduction for paper and card recovery across all collection schemes, with a slight increase for third party recovery.

| TOTAL | 192,022 | 198,763 | 6,740 | TOTAL | 25,467 | 24,088 | -1,378 |

| Residue | 2017/18 | 2018/19 | Change (t) | Residue | 2017/18 | 2018/19 | Change (t) |
|--------------|----------------|----------------|---------------|---------|---------|---------|------------|
| WCA | 139,318 | 133,544 | -5,774 | UA | 34,340 | 34,276 | -65 |
| WDA | 24,270 | 22,880 | -1,391 | | | | |
| TOTAL | 163,588 | 156,424 | -7,164 | | | | |

Table 3 – Material Recycled – DASWC Reported Streams

With improved recycling, welcome reductions to residual waste are also noted with -7,164 tonnes less residual waste collected throughout Devon. The most significant reduction is noted for WCA residue and in particular Torridge, who reduced their residue by -3,875 tonnes through system changes resulting in their significantly improved performance this year. Only Exeter encountered an increase in residue principally through a 90% increase in MRF rejects. This is primarily due to ongoing material issues at Exeter MRF.

6. Current Service Provision and Future Plans

Devon's SSS has undoubtedly contributed to the continued increase in recycling performance which is further driven by effective partnership working through DASWC at all levels.

With a continuing focus to make more effective use of resources through the Circular Economy Package, and proposed national policy changes, it is likely that local authorities will continue to be at the forefront of communication with residents to encourage greater participation and satisfaction with services, whilst embracing the 3Rs message (Reduce, Reuse & Recycle).

Over the next two years, Exeter, South Hams and West Devon propose significant service enhancements broadly in line with the aligned option.

Exeter proposes to switch to kerbside sorting including glass and food waste which will boost performance considerably whilst also improving the material quality for onward sale to reprocessors.

South Hams will also include separate weekly food waste collections and West Devon is proposing further service changes to encourage greater participation.

With further national policy changes envisaged through the Government's resource and Waste Strategy, it is likely that the industry is on the brink of one of the most significant

overhauls of the waste sector in recent years against a strong policy to improve performance further.

7. Financial Considerations

Managing waste more effectively in line with the Waste Hierarchy can reduce costs at a time when local authority budgets are under pressure. Investment in communications for residents and capital investment to improved services has the potential to reduce costs for local authorities and should be supported by members.

8. Sustainability Considerations

DASWC authorities are broadly delivering or aspiring to deliver the aligned option. This approach is supported by National policy as a more sustainable way of managing waste at local authority level.

9. Carbon Impact Considerations

Effective waste management systems and processes have the potential to reduce carbon emissions where recovered material meets quality standards and as a result replaces the need for primary raw materials for subsequent manufacture and consumption.

10. Equality Considerations

There are no equality considerations associated with this report.

11. Legal Considerations

Local authorities are legally bound to provide recycling services to residents within a tightly regulated industry. Authorities also have a legal duty to ensure data quality for subsequent reporting to government.

12. Risk Management Considerations

There are no significant risks associated with this report, but members should consider national policy changes which have the potential to impact on current systems and processes.

13. Public Health Impact

There are no public health impacts associated with this report.
