HEALTH AND WELLBEING OUTCOMES REPORT 2016-19

Overview

The public health outcomes framework sets the context and 'strategic direction' for the new public health system with the vision of 'improving and protecting the nation's health while improving the health of the poorest fastest'. There are two overarching indicators concerning healthy life expectancy and life expectancy, and four domains with 66 further indicators, and around 130 sub-indicators. The domains are improving the wider determinants of health, health improvement, health protection, and healthcare public health. A prioritisation exercise was completed in 2013 and updated in 2016 which looked at performance, human impact, and financial costs for these indicators and the prioritisation grid which lists out all indicators is available at www.devonhealthandwellbeing.org.uk/jsna/performance/phof.

Indicators which have a large impact in terms of numbers affected and impact, or which are high spend areas for Public Health Devon, as well as indicators for areas where performance is poorer than similar areas or deteriorating and improvements to outcomes are required were selected for be covered by this report. Other indicators covering areas where local outcomes are positive and the scale, human impact and cost are not high are monitored through the Public Health Outcomes Tool: www.phoutcomes.info and other sources.

Local Authority District – highlighting differences within Devon between local authority districts. South West and Local Authority Comparator Group Benchmarking - showing the position of Devon relative to the these rate. Trend – showing change over time on the selected indicator in Devon.

Indicators which have been updated since the last report are marked as *
