

Channel View – Primary care provision in Teignmouth.

November 2024

NHS Devon have commissioned by Archus (a healthcare infrastructure specialist and partner in recent Primary Care estates toolkit work in Devon) to provide a detailed options appraisal of potential sites to provide primary care in Teignmouth. The report will provide an impartial view and will ensure we focus our efforts on identifying viable sites and will cover available buildings and empty plots.

The report was received on 5 November and is currently being reviewed by the primary care and estates teams. The outcome and recommended options will follow usual governance process and will be brought back to Devon OSC once there is more information to share. This will include rapid prioritisation based on cost, timescales size and ability to gain planning consent. Patients and stakeholders will be advised and engaged in future planning once this has taken place.

Due to the complexity of decision-making, it is unlikely we will have any further updates until the New Year when we anticipate the preferred option will be known.
